**Alternative Name:** 'Susan's Joy'

**Origin:** An unusual off-type plant was found in an AVRDC pepper program trial field in 1996, and released in 1999. The line produces concentrated early sets of large fruit, which also mature early.

Young fruit often have low pungency, and can be used as vegetable chili. However, mature fruit can become quite hot, depending on the growing environment. This line has been used as a long-term check in our International Chili Pepper Nursery (ICPN).
